5.2 Special elements

"Special elements" contain elements for adding HTML-code, displaying a sitemap, adding a divider in between elements and creating referenced content on the site. (Img. 5.2.1)

5.2.1

List of elements

Special Menus

"Special Menus" allows you to create a sitemap, listing all available pages with active links, but it can also create a list of selected pages in a linked list. [Read more about the Special menu](#) (Img. 5.2.2)

Sitemap

5.2.2

Plain HTML

Sometimes you need to embed information from other places, like a mail subscription form or a video clip from Youtube. In these cases you need to use the "Plain HTML" element to add the information. The retrieved code is pasted into the element.

Divider

The "Divider" element adds a thin line in between two content elements. When creating this element, you only need to save and close. No specific settings are needed.

Insert records

By using the "Insert records" element, you can mirror content to other pages by creating a reference. For example, if you have an information box that you wish to have on multiple subpages, but only want to have to edit it in one place. Then you can create a reference, instead of a copy, and by editing the original element the information, it will automatically be updated in all the references as well.

When pasting a copy on a page, TYPO3 will ask you if you wish to paste a copy or a reference.
