

2. The SEO module in TYPO3 (using cs_seo extension)

Go to the SEO module, by selecting 'SEO' in the left hand menu (1), and clicking the startpage in the page tree (2). Now you will see all first level pages in a list on the right-hand side. You can select any page, to focus on that particular section. Expand the page level shown, by setting Depth (3). Below you will see available pages (4). (2.1)

The screenshot shows the TYPO3 backend interface. On the left, the 'WEB' menu is expanded, and 'SEO' is selected (1). In the page tree, 'TYPO3manual.com' is selected (2). The 'SEO' module is active, showing a 'Language' dropdown set to 'Default' and a 'Depth' dropdown set to '2' (3). Below these, a table lists available pages (4):

Page title:	Browser Title	Title only	Description:

2.1

The fields you are able to edit, from the SEO module, are; 'Browser Title', 'Title only' (to only use the browser title, and not the suffix) and 'Description'. To edit a field, double-click it in the column (1). The addition will automatically be saved when clicking outside the field. Below you will be able to see what the text will look like in a search result (2) and also how many characters are left for this particular field (3). (2.2)
