Language layers in TYPO3 version 6

The language handling in TYPO3 is built in layers. That means all languages are handled on the same page, and not built in separate trees. The site is created in the default language and then a page is translated into selected language, which will then let you translate the default elements on that page. It is also possible to create pages shown in one language or have different elements on a translated page. This also allows you to see if a change has been made in the default language, through a notification. This manual will guide you to these different approaches.

1. Translating a page

1.1 Create translation
1.2 Adding meta data to translated page
1.3 Hiding translated page

2. Editing settings for translated page

2.1 Access page settings
2.2 Remove page translation

3. Translating content

3.1 Create translation

4. Editing translated content

4.1 Edit element
4.2 Remove translated

5. Create a page for single language (not default)

5.1 Set translation to

element

single language

6. Create separate content for different languages

6.1 Set element to specific language

7. Translating records (Ex. news)

7.1 Translating the folder

7.2 Create a translation for ex. news record

7.3 Changing language of News
